

Vaibhav Sabnis

Technology Executive | Distributed Systems, Platform Engineering & Financial Infrastructure
New York, NY | +1 (973) 337-0312 | vaibhav.sabnis@gmail.com | [LinkedIn](#) | US Citizen

Executive Summary

Seasoned engineering leader with 20+ years building and scaling distributed financial infrastructure, data platforms, and regulatory systems across Meta, Goldman Sachs, and Morgan Stanley.

- Led global multi-layer engineering organizations spanning engineers, managers, and directors responsible for investor transaction systems, ML-driven risk monitoring and operational governance initiatives for regulated financial environments.
- Deep technical background in distributed systems, data infrastructure, cloud-native modernization, and high-performance compute platforms, with experience balancing engineering velocity, platform reliability, and regulatory risk management at enterprise scale.

Core Competencies & Functional Domain

- Institutional Leadership: 3–5 Year Tech Roadmaps | Global Org Design (125+ FTEs) | Capex/Opex Capital Budgeting | Vendor Selection | Buy-vs-Build Strategies | Digital and Cloud-native transformations
- FinTech & Banking Domain: Hedge Fund Administration | Prime Brokerage & Sell-Side Infrastructure | Cash and Payment Management | Transaction Reconciliation | Portfolio Accounting | NAV Valuations | Tax Estimates & K-1 Allocations
- Risk, Regulation: AML/KYC Transaction Monitoring | MNPI/PII Sensitive Data Controls | SSAE16 & GDPR Audit Readiness | BC/DR strategies
- High-scale compute & AI Engineering: LLM Agentic Workflows | ML Observability & Explainability | Low-Latency proprietary HPC | Unstructured document and content processing | Distributed Data Platforms

Work Experience

Meta | NYC (Jun 2021 – Present): Software Engineering Manager – Product Infrastructure: ML Systems Governance

- Founded a net-new engineering organization and scaled it to 4 global teams (~40+ headcount) focused on building ML infrastructure for model explainability, training, inference and evaluation across core Ads Ranking and Messaging products.
- Engineered real-time predictive observability platforms for high-throughput Ads-Delivery and User-Facing Messaging Products, reducing anomaly detection from weeks to minutes and safeguarding \$1.4B+ in annual Ads impression-based revenue.
- Spearheaded an enterprise initiative to audit and optimize engineering operational costs; defined macro-level developer efficiency metrics and optimized the percentage of engineering time spent on operations to maximize engineering effort allocation.
- Championed the enterprise deployment of generative AI agentic platforms for internal developer tooling, driving development efficiencies for 150+ cross-functional engineering partners.

Goldman Sachs | NYC (Oct 2020 – Jun 2021): Executive Director – Core Platform Engineering, Global Markets Division

- Managed a 30-person platform and quantitative engineering team executing the early-stage migration of SecDB towards a cloud-native architecture; established a collaborative inner-source SDLC framework to modernize OTC pricing risk infrastructure across Goldman's core codebase (Slang).
- Drove engineering execution to optimize runtime compute efficiency for global markets trading systems by directly refining the proprietary Slang language runtime, low-level memory constructs, and custom compiler configurations.
- Navigated complex technical roadmaps by driving day-to-day alignment across quantitative trading desks, risk management functions, and core infrastructure divisions.

Morgan Stanley | New York (Jan 2006 – Oct 2020): Executive Director – Morgan Stanley Fund Services (MSFS) & Prime Brokerage Technology

Global Head of Investor Data Engineering (2011 – 2020)

- Managed a multi-layered global engineering division of 125+ personnel overseeing data infrastructure, regulatory technology platforms and investor transaction systems supporting \$700B+ in Asset Under Management (AUM).
- Launched a dedicated engineering division that delivered an advanced, ML model-driven point-based risk ranking framework for institutional investment and franchise risk monitoring, directly contributing to a 7% YoY business revenue increase while satisfying stringent US and Cayman regulatory mandates.
- Architected an adaptive, content extraction platform leveraging OCR and NLP pipelines to ingest millions of unstructured financial documents; instrumented a strategic DocuSign technology partnership; slashed content extraction time by 75% and automated manual intervention across millions of client tasks per month under sub-second latency.
- Consolidated fragmented legacy data systems into a high-capacity, fault-tolerant central repository serving 90+ downstream enterprise applications, handling 250K interactions/hour under a sub-second, 200ms average latency.
- Achieved a 40% reduction in client interaction time and cut annual operational overhead by 10% (saving 150 FTEs of business operations) while enforcing strict SSAE16 and GDPR compliance to insulate sensitive PII/MNPI datasets.

Founding Core Software Engineer (2006 – 2011)

- Served as founding engineer for proprietary distributed transaction, position, and cash management infrastructure handling trillions of dollars in payment system throughput while achieving a 90% automated trade break resolution rate (from 10%).
- Designed and engineered complex transaction-matching algorithms, real-time calculation engines, and an on-demand K-1 tax allocation system computing wash sales and constructive sales asset distributions to enable tax-efficient front-office trading decisions and building out the tax allocation ledger.
- Phased out legacy third-party vendor licensing costs by 30% through the development of highly customized, internal tax and economic accounting systems.

Early Career History & Education

- **Early Career History (2001 – 2006):** Software Programmer with Mastek Ltd. (UK) delivering distributed migrations in insurance and aerospace domains | Engineering Intern at IIT Bombay focusing on VoIP/SIP protocols for Microsoft-backed research projects.
- **Education:** Bachelor of Engineering in Electronics & Telecommunication (June 1998 – June 2002) – First Class with Distinction, Mumbai University, India.

Technical Skills Matrix

- System Architecture: High-Availability Distributed Systems, Low-Latency/HPC Compute, Cloud Migrations (Azure/AWS), DevSecOps, Enterprise Data Governance (MNPI/PII), Enterprise Workflow Automation, 3-5 Year Technology Roadmaps, Capital Budgeting, Vendor Management
- Programming Languages & Frameworks: Core Java, Python, C++, Kotlin, Spring Boot, SQL, Sybase, Slang, Shell Scripting, REST/SOAP APIs, WebSockets
- Data, Infrastructure & AI Platforms: Presto, Hive, Spark, BigQuery, Scribe, Linux Environments, Distributed Cloud Clusters, Message Queues, OpenNLP, OCR Text Mining Pipelines, LLM Frameworks (MetaMate, DevMate/MuseSpark, Anthropic Claude, OpenAI Codex), ML Infrastructure, Model Observability & Explainability Tooling
