

# Vaibhav Sabnis

Senior Engineering Leader | Distributed Systems, ML Infrastructure & Platform Reliability  
New York, NY | +1 (973) 337-0312 | [vaibhav.sabnis@gmail.com](mailto:vaibhav.sabnis@gmail.com) | [LinkedIn](#) | US Citizen

## Executive Summary

Engineering leader with 20+ years of experience building and scaling distributed systems, infrastructure platforms, and ML reliability organizations across Meta, Goldman Sachs, and Morgan Stanley.

- Led organizations ranging from early-stage 0→1 platform teams to global engineering orgs of 125+ engineers and managers across infrastructure, observability, developer productivity, data platforms, and large-scale transaction systems.
- Proven track record of driving organizational transformation, operational excellence, and platform modernization initiatives supporting large-scale revenue, regulatory, and reliability-critical systems.
- Experienced leading multi-layer organizations through hiring, org design, roadmap planning, and cross-functional execution across globally distributed teams.
- Deep technical background in performance-critical backend systems, cloud-native architectures, and ML infrastructure reliability across C++, Java, and Python ecosystems, including adoption of LLM-assisted engineering workflows and internal agentic developer platforms leveraging tools such as MetaMate, DevMate, Claude, and Codex.

## Work Experience

### Meta | New York, NY | June 2021 - Present

*Software Engineering Manager, Ads Model Robustness, Explainability & Messaging Platform Reliability*

- **Org Scale & Scope:** Direct a 40+ person engineering organization spanning managers, tech leads, and senior ICs across hiring, performance management, and organizational planning within globally distributed teams.
- **Strategy & Collaboration:** Built a new engineering organization from inception, defining multi-year technical strategy, operating models, and cross-functional execution across 150+ partner teams spanning infrastructure, ML, and product.
- **Revenue Protection:** Led development of production engineering readiness frameworks focusing on Performance, Reliability, Efficiency, and Quality (PREQ) alongside ML observability platforms, reducing critical model failure detection time from weeks to minutes and protecting \$1.4B+/year in at-risk ad revenue.
- **Agentic Developer Productivity:** Championed adoption of LLM-assisted engineering workflows and internal developer productivity platforms using MetaMate, DevMate, Claude, and Codex to improve software development efficiency and operational automation across the organization.
- **Tech:** C++, Python, Scribe, Presto, Hive/Spark, AI/Agentic: MetaMate, DevMate (MuseSpark), Anthropic Claude, OpenAI Codex

### Goldman Sachs | New York, NY | Oct 2020 - June 2021

*Executive Director, Core Platform Engineering, Global Markets Division*

- **Scale & Collaboration:** Led a 30-person engineering organization across platform engineering, quantitative engineering, and distributed compute systems supporting global markets technology. Managed cross-functional collaboration across engineering, infrastructure, and quantitative trading teams within globally distributed environments.
- **Cloud-Native Platform Modernization:** Led early-stage modernization of Goldman Sachs' SecDB risk platform from monolithic on-prem infrastructure toward a cloud-native distributed architecture, helping establish the foundation for a multi-year platform transformation initiative.
- **Low-Level Compute Optimization:** Architected deep technical enhancements across custom compilers, low-level memory constructs, and distributed cluster configuration to maximize throughput efficiency across massive HPC environments serving global markets trading infrastructure.
- **Tech:** C++, Python, Linux, distributed cloud clusters, HPC environments

## Vaibhav Sabnis

Senior Engineering Leader | Distributed Systems, ML Infrastructure & Platform Reliability  
New York, NY | +1 (973) 337-0312 | [vaibhav.sabnis@gmail.com](mailto:vaibhav.sabnis@gmail.com) | [LinkedIn](#) | US Citizen

### Morgan Stanley | New York, NY

**Executive Director, Morgan Stanley Fund Services (MSFS) & Prime Brokerage Technology**

**(2011 – 2020)** Executive Director | Global Head of Engineering for Investor Data

- **Org Scale & Portfolio:** Led a global multi-layered engineering organization of 125+ engineers, managers, and technical leads responsible for cloud-native platforms, investor transaction systems, data infrastructure, and regulatory technology supporting Morgan Stanley Fund Services and Prime Brokerage operations. Platform handled ~850Bn AUM.
- **Topline Revenue Growth:** Built and expanded engineering leadership teams spanning platform engineering, fraud detection, regulatory systems, and document intelligence, driving modernization across cloud infrastructure, DevOps, and API-first platform architecture that contributed to 7% year-over-year revenue growth for business.
- **Platform Efficiency/scale:** Architected and scaled distributed microservices and data platforms processing millions of investor transactions and documents across global markets under sub-second processing latency, improving operational scalability and client processing efficiency. Led platform centralization initiatives that reduced operational overhead by 10% YoY, equivalent to 150 FTEs.
- **ML Driven Risk Platform:** Led development of machine learning and large-scale document processing platforms for transaction monitoring, franchise risk analysis, and document classification using OCR and NLP pipelines processing millions of unstructured financial documents.
- **Tech:** Java, Spring Boot, WebSockets, Azure, OpenNLP, OCR pipelines, DevOps

**(2006 – 2011)** Senior Engineer | Founding Member of Core Architecture & Design

- **Core Platform Design:** Served as founding engineer for core architecture and distributed transaction platform infrastructure supporting large-scale hedge fund servicing and payment systems. Designed and implemented distributed transaction processing, reconciliation, and portfolio accounting platforms that significantly improved transaction integrity, operational efficiency, and revenue collection workflows while eliminating third-party vendor software and driving a 30% improvement in revenue collections.
- **Algorithmic Engines guiding trading decisions:** Designed and engineered complex transaction-matching algorithms and real-time calculation engines to compute wash sales and constructive sales asset distributions, enabling front-office traders to execute optimal transactional decisions.
- **Tech:** Java, Sybase, algorithmic transaction engines, portfolio NAV proprietary systems

### Early Career History (2001 – 2006)

- Software Programmer at Mastek Ltd delivering distributed architecture migrations
- Academic research as engineering intern at IIT Mumbai focusing on VoIP/SIP protocols.

### Education

Bachelors in engineering | Electronics & Telecommunication (June 1998 – June 2002)

- First Class with Distinction, Mumbai University, India

### Technical Skills

- System Architecture: Distributed Infrastructure, Cloud-Native, HPC, DevOps, Platform Observability
- Programming Languages: C++, Java, Python, Spring Boot, WebSockets, Linux Systems
- Platforms & Tools: Presto, Hive, Spark, Scribe, OpenNLP, OCR, MuseSpark, OpenClaw, Claude, Codex
